

Some patients, you have to turn away. Now you can say yes.

Every practice meets them - the same-sex couple who needs a gestational surrogate, the patient searching for a donor who shares her heritage, the family seeking gender selection, and the patients you are unable to treat because of sexual orientation, marital status, or age. A partnership with RSMC gives them a legal, physician-led path in the United States - while they remain your patients.

*Beyond Borders. Beyond Limits.
Building Families Together.*

The RSMC Group

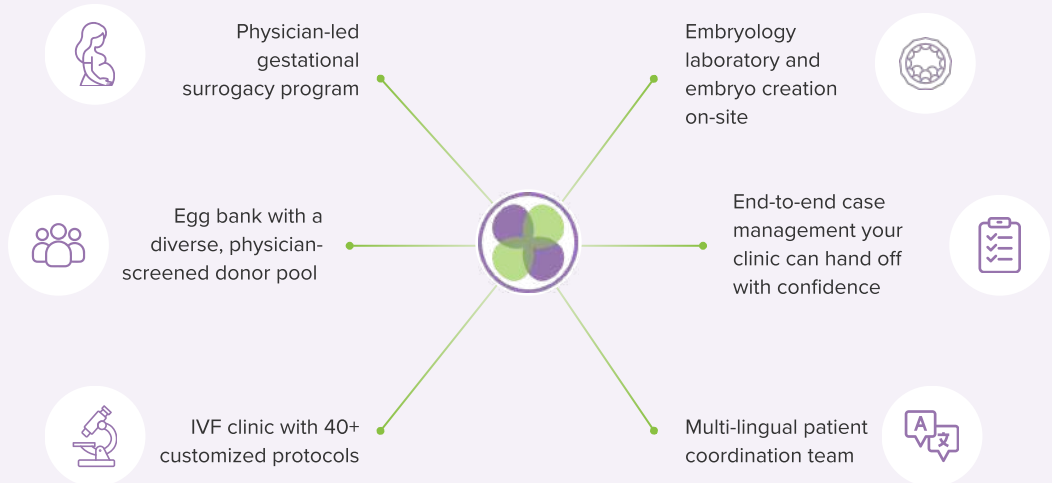

ONE GROUP ONE STANDARD OF CARE

One coordinated U.S. medical center - not an agency

RSMC is a U.S. medical center specializing in thirdparty reproduction and international patients. Everything your patient needs operates under one roof, under one medical governance.

Your patient is never left to navigate a maze of international treatment alone. Every step is coordinated by our physicians — and you stay informed throughout.

UNDER ONE ROOF AT RSMC

ELSE WHERE IN THE U.S.

Most U.S. surrogacy runs through agencies.

- External clinics
- External laboratories
- Patients left to coordinate the steps
- Coordination without clinical control

AT RSMC

Ours runs through a medical center.

- Physicians on staff lead the program
- The laboratory is ours, on-site
- One team accountable to you — end to end
- One standard of care — accountable to us

Say yes to **more patients**

THE PATIENTS YOU CAN NOW HELP

- Same-sex couples
- Single women & single men
- Patients excluded by sexual orientation
- Patients restricted by marital status or age
- Patients of any nationality

THE CARE THEY GAIN ACCESS TO

- Gestational surrogacy
- Egg donation - phenotypes patients cannot find at home
- Gender selection
- IVF & embryo creation
- PGT genetic screening

Worldwide

Frozen donor eggs & embryos ready to ship

Guarantee

In-house embryo creation & guarantee program

Multi-lingual staff · End-to-end case management for referring clinics · Physician-authored case updates

How the partnership works

1

A partnership meeting

Clinic to clinic, physician to physician. We learn your practice, your patients, and what you want a U.S. partner to handle.

2

We adapt to your practice

You choose the referral path that fits how you work — refer directly or simply point patients our way. We never ask you to work outside your comfort.

3

Care at one medical center

Treatment happens at RSMC in San Diego. If your patient already has embryos, they ship center to center to our on-site laboratory.

4

You stay informed

We update you as your patient proceeds — from agreement to care — and the relationship stays yours, with our team available throughout.

Physician-to-physician coordination

Direct access to our medical team - no third parties in between.

Complimentary partner tools

Donor database access for partner clinics, at no cost to you.

Reporting on every referral

Know where your patient stands, from consult to care.

Ease of communication

WhatsApp, email, or a scheduled call - we work the way you already work.

Start the conversation.

A partnership meeting is a conversation, not a commitment — 30 minutes to explore what a collaboration could make possible for your patients. Your first conversation is with **Guilherme Lobo de Felício, Director of International Partnerships** — backed by **Dr. David Harari, M.D., President & CMO**, and **Julianna Nikolic, CSO**.
